DETAILED ACTION

Claim Objections

1. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 1-21 have been renumbered 10-30.

2. Claim 30 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim must list the claims it depends from in the alternative. See MPEP § 608.01(n). Accordingly, the claim has not been further treated on the merits.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1754

4. Claims 10-29 are rejected under 35 U.S.C. 102(b) as being anticipated by Convers et al. 4,460,699.

Regarding claim 10, Convers '699 discloses a fixed bed catalyst for oxychlorination comprising thin layers of high specific surface area material (see abstract and column 5, lines 3-8), gamma alumina (see column 4, lines 57-61), and salts of copper, magnesium, and lithium (see column 5, lines 20-30).

Regarding claim 16, Convers '699 discloses gamma alumina carrier (see column 4, lines 57-61), impregnation in several steps with aqueous solutions of the single reagent which is to be loaded onto the solid carrier (see column 1, lines 34-39) and salts of copper, magnesium, and lithium (see column 5, lines 20-30).

Regarding claim 11, Convers '699 discloses salts of copper, magnesium, and lithium (see column 5, lines 20-30).

Regarding claims 12 and 17, Convers '699 discloses chloride salts (see column 5, lines 20-21 and 31-32).

Regarding claims 13-14 and 19-21, Convers '699 discloses 0.1-9% copper (see column 5, lines 22-27) and a 0.05-1.0 metal to Cu molar ratio (see column 5, lines 32-35).

Regarding claims 15 and 22-29, Convers '699 discloses gamma alumina carrier (see column 4, lines 57-61) a minimum carrier surface area of 50 square meters per gram (see column 1, lines

41-43) and carrier thickness of 0.001-1 mm (see column 2, lines 20-22).

Regarding claim 18, Convers '699 discloses gamma alumina carrier (see column 4, lines 57-61), impregnation in several steps with aqueous solutions of the single reagent, which is to be loaded onto the solid carrier (see column 1, lines 34-39) and salts of copper, magnesium, and lithium (see column 5, lines 20-30).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bhasin 4,908,343 discloses a catalyst composition for oxidation of ethylene (see abstract) comprising alumina with lithium and magnesium salts (see column 1, lines 17-23) and supports comprising gamma alumina (see columns 23-24, Carriers E-H); Matusz et al. 5,380,697 discloses an ethylene oxide catalyst and process comprising an alumina based carrier (see abstract) impregnated with magnesium (see column 6, line 9) and lithium chloride (see column 8, lines 21-22).
